# New Chances!

*exxact – the press felt concept outperforming nonwoven, multiaxial and laminated felt designs!*

## **exxact – the idea**

Today's fast running paper machines need ingenious clothing technology which results in highest performance right from the start.

Huyck.Wangner developed a unique structural bound press felt concept providing highly precise forming fabric technology for your press section.

## **exxact – features**

exxact represents highly elaborated weaving technology offering engineered dewatering channels for high performance press felts. Exactly positioned MD and CMD yarn systems provide controlled drainage and obtain stable runnability compared to nonwoven, multiaxial or laminated structures.

- microfine paper side
- engineered drainage channels
- low initial void volume
- low flow resistance
- high elasticity

## **your benefits**

- immediate start-up
- high nip dewatering
- uniform profiles
- improved runnability
- good printability
- high stability

## **exxact – field experience**

- faster start-up and high nip dewatering (Copy paper, 1200 mpm; Pick up)
- improved profiles and perfect runnability (News, 1740 mpm, 1<sup>st</sup> press)
- fast start-up and high drainage (Magazine coated, 1500 mpm, 1<sup>st</sup> press)

## **exxact –**

the right felt for your machine!
